EDUCATION

Simon Fraser University

Bachelor of Science in Computer Science

Burnaby, BC

Sep 2023 – Dec 2027 (Expected)

TECHNICAL SKILLS

Frontend & Web: React, Redux Toolkit, Tailwind CSS, HTML, CSS, Responsive Design

Languages: JavaScript, Python, C/C++, SQL

Backend & Web Servers: Node.js, Express.js, REST API Design, JWT Authentication

CS Concepts: Data Structures, Algorithms, Object-Oriented (OO) Design, Databases (MongoDB, SQL)

Testing & QA: Unit Testing, End-to-End Testing, Test Case Design, Data Validation, Postman

Systems, Cloud & Tools: Linux, Bash/Zsh, AWS EC2, Vercel, Docker, Git, GitHub, VS Code

TECHNICAL PROJECTS

Blog Platform | [Live Demo](#)

Jun 2025 – Jul 2025

React, Redux Toolkit, Tailwind CSS, Appwrite

- **Frontend:** Built and deployed a responsive blog platform on Vercel using React and Tailwind CSS, composing the interface from reusable components to keep layout and styling consistent across pages and screen sizes.
- **State Management:** Managed global application state with Redux Toolkit for predictable data flow across authenticated and public views, wiring the frontend to Appwrite for auth, database, and file storage.

JotDown — REST API Backend | [GitHub](#)

Jul 2025 – Aug 2025

Node.js, Express.js, MongoDB, JWT, Postman

- **API Design:** Designed RESTful endpoints for full CRUD operations on notes with input validation and structured MongoDB schemas to keep data consistent across requests.
- **Auth:** Built JWT authentication with middleware-enforced route protection and persistent HTTP cookie sessions to maintain login state across refreshes and browser restarts.
- **Testing:** Wrote unit tests across core business logic and edge cases, then ran end-to-end checks on every request flow and failure mode in Postman to confirm endpoints behaved correctly under both valid and invalid input.

Crypto Trading Bot | [GitHub](#)

Sep 2025 – Present

Python, Pandas, NumPy, Matplotlib, AWS EC2

- **Multi-Timeframe Pipeline:** Designed an 8-stage data pipeline that loads, validates, and processes raw OHLCV data across multiple timeframes, enforcing clean inputs before strategy execution and a clear separation between trend analysis and execution logic.
- **Backtesting:** Validated strategy logic across a 2-year historical dataset, reaching a 52% win rate, and wrote structured CSV and JSON output reports to track performance across parameter configurations.
- **Strategy:** Implemented a long-only pullback strategy with volatility regime filtering using EMA-200 on the daily timeframe and ATR on the 4H timeframe to improve signal reliability.
- **Live Integration:** Extending the pipeline with the Kraken API to support live market data ingestion and order execution for end-to-end forward testing.

WORK EXPERIENCE

Fraser International College

Peer Educator

Burnaby, BC

May 2024 – Dec 2024

- Guided students through structured problem-solving rather than handing over solutions, building their independent reasoning.
- Managed multiple concurrent sessions while tracking individual progress and adapting explanations to each student's level of understanding.
- Assisted students in debugging Python and C++ programs, focusing on logic errors and memory-related issues.
